THE ABANDONED COMPUTER (1998)

Hackathon Winner Presentation Pitch Guide & Script | Rahul Sharma Mystery

WINNING DEMO PITCH

🔥 **DUNIYA SE ALAG DIKHNE KA SECRET:** Baki sab teams bolengi: *"Sir humne Windows 98 ka clone banaya hai."*
AAP KYA BOLOGE: *"Sir, sabne clone banaya, lekin humne 1998 ka ek real abandoned computer discover kiya hai jisme 26 saal pehle gayab huye student 'Rahul' ki aatma aur files phasi hui hain! Yeh UI project nahi, ek Interactive Horror/Sci-Fi Mystery Game hai!"*

🔑 **PASSWORD KA RAZ (YAAD RAKHNA):**
Folder `project_x` ka password hai: `2000samosa`
Simple logic: Rahul Y2K bug (saal 2000) se darta tha aur college canteen ka **samosa** uska favourite tha. Dono milakar: `2000samosa`. Bas itna bolna hai!

STEP 1: The Boot Screen Hook

0:00 - 0:40

Aapka Action: Screen refresh karo ya nayi tab me open karo.
Screen par kya dikhega: CRT BIOS memory test (65536KB OK) aur red warning: *"WARNING: User profile corrupted. Last login: 26 years ago."*

> ***Aapko kya bolna hai:***
> *"Good afternoon judges! Aamtaur par sab teams ne modern browser me Windows 98 ka standard clone banaya hoga. Lekin hamara project ek story-driven time capsule hai. Dekhiye screen par: RAM count ho rahi hai aur BIOS warning de raha hai: 'User profile corrupted. Last login: 26 years ago.' Yeh computer October 1998 ke baad aaj pehli baar on hua hai!"*

STEP 2: The Ghost in Notepad (The "WOW" Moment)

0:40 - 1:15

Aapka Action: Desktop se **Notepad** kholo aur type karo: `HELLO RAHUL`
Screen par kya dikhega: Screen glitch karegi aur text apne aap pop-up hoga: *"[COM1 VIRTUAL TTY - RAHUL ONLINE]: WHO IS TYPING? ARE YOU LOGGED INTO MY COMPUTER AFTER 26 YEARS?..."*

> ***Aapko kya bolna hai:***
> *"Judges, dekhiye! Jaise hi humne blank Notepad me 'HELLO RAHUL' likha, computer glitch hua aur Rahul ne 26 saal purane virtual COM1 modem port se direct reply back kiya! Usne bataya ki uski files Recycle Bin aur project_x me locked hain!"*

STEP 3: The Secret Vault & Password (2000samosa)

1:15 - 1:50

Aapka Action: Desktop par **project_x** folder par double click karo. Jab password prompt aaye, type karo: `2000samosa`
Screen par kya dikhega: Green access granted status aur folder ke andar `project_x_plan.doc` aur `signal_log.txt` khul jayenge.

> ***Aapko kya bolna hai:***
> *"Rahul ne is classified folder ko protect kiya tha. Clues dhoondhne par pata chalta hai ki Rahul Y2K bug (2000) se obsessed tha aur canteen ka samosa uska favourite tha — password tha '2000samosa'. Unlock karte hi alien signal frequency logs samne aate hain!"*

STEP 4: Fake 1998 Internet Explorer & Dial-Up Audio

1:50 - 2:25

Aapka Action: Desktop se **Internet Explorer** kholo.
Screen par kya dikhega: Real 56k dial-up modem handshaking audio play hoga. WebCrawler 98 search engine, Rahul's GeoCities CyberDen aur Campus Inquirer news khulegi.

> ***Aapko kya bolna hai:***
> *"Yeh hai hamara custom Web Audio API-synthesized 56k dial-up modem! Isme 1998 ka GeoCities page hai jisme Rahul ki personal website aur October 1998 ki campus headline hai: 'Engineering Student Disappears from Computer Lab.'"*

STEP 5: The Dramatic Shutdown Finale

2:25 - 3:00

Aapka Action: Start menu par click karo → **Shut Down...** → Click **Yes**.
Screen par kya dikhega: Screen poori tarah red/cyan glitch karegi, CRT scanlines aayengi, Rahul ka 26 saal purana confession print hoga, aur screen par aayega: '*SYSTEM RESTORED. THANK YOU FOR FINDING ME.*' Phir desktop par secret `Rahul_Artifact_1998.exe` unlock ho jayega!

> ***Aapko kya bolna hai:***
> *"Aur jab aap computer shut down karte hain... system crash nahi hota, balki Rahul ka final digital soul restore ho jata hai! Thank you judges, this is THE ABANDONED COMPUTER!"*

💡 Additional Easter Eggs (Agar Judge bole aur dikhao)

- **MS-DOS Prompt:** Type karo `rahul`, `matrix`, ya `signal`
- **Fake BSOD:** MS-DOS me type karo `bsod` ya `crash`
- **Paint:** `ufo_sighting.png` kholo → Invert Colors karo to alien coordinates dikhenge!
- **Minesweeper:** Bomb par click karne par pop-up: '*Rahul did not survive this either.*'

🚀 1-Minute Live Deployment Guide (Vercel)

1. Go to **vercel.com** & Sign in with GitHub.
2. Click **"Add New..."** → **Project**.
3. Select **princesoni010/windos98** & click **Import**.
4. Root Directory: `./` (Leave default). Build Command: `npm run build`, Output: `dist`.
5. Click **Deploy** → 1 minute me aapko live link mil jayega!
